Zero Trust Security Checklist

Practical steps for SMBs to start implementing Zero Trust today.

Checklist

- ☐ Enable Multi-Factor Authentication (MFA) across all apps.
- ☐ Segment the network to limit lateral movement.
- ☐ Adopt a cloud identity provider (e.g., Azure AD, Okta).
- ☐ Use endpoint protection and EDR solutions.
- ☐ Monitor activity continuously and set anomaly alerts.
- ☐ Train employees to recognize phishing and social engineering.
- ☐ Review access privileges regularly and enforce least privilege.

Zero Trust isn't a single product — it's a mindset and framework that SMBs can adopt incrementally for big security gains.
